

## Chapter 20 FBs-4A2D Analog Input/Output Module

FBs-4A2D is one of the analog I/O modules of FATEK FBs series PLC. For analog output it provides 2 channels of 14 bit D/A output. Base on the different jumper settings it can provide varieties of current or voltage output signal. The output code can be configured as unipolar or bipolar which makes the relation of output code and real output signal more intuitive. For safety, the output signal will be automatically forced to zero(0V or 0mA) when the module is not serviced by CPU for 0.5 second.

For analog input it provides 4 channels A/D input with 12 or 14 bits effective resolution. Base on the different jumper settings it can measure the varieties of current or voltage signal. The reading value is represented by a 14 bit value no matter the effective resolution is set to 12 or 14 bits. The output code also can be configured as unipolar or bipolar which makes the relation of input code and real input signal more intuitive.. In order to filter out the field noise imposed on the signal, it also provides the average of sample input function.

### 20.1 Specifications of FBs-4A2D

#### General specifications

|                            |  |  |
|----------------------------|--|--|
| Isolation                  | Transformer(Power) and photocouple(Signal) |  |
| Indicator(s)               | 5V PWR LED                                 |  |
| Internal Power Consumption | 5V 100mA                                   |  |
| External power supply      | 24V-15%/+20% 100mA                         |  |
| Operating Temperature      | 0 ~ 60                                     |  |
| Storage Temperature        | -20 ~ 80                                   |  |
| Dimensions                 | 40(W)x90(H)x80(D) mm                       |  |

### 20.2 The procedure of using FBs-4A2D analog input/output module

## 20.3 Address allocation of FBs-PLC analog inputs/outputs

FBs-4A2D offers 4 AD points and 2 DA points. The AD points number starts from the one nearest to the PLC, the number in order is CH0~CH3 (module 1); CH4~CH7 (module 2); CH8~CH11 (module 3); etc, accumulates in serial; i.e. add 4 to each module, the total is 64 points (CH0~CH63) corresponding top the value IRs inside the PLC (R3840~R3903), respectively. In DA point numbering, from the one nearest to the PLC, the number runs from CH0 through to CH63 in serial, the total is 64 points corresponding top the value ORs inside the PLC (R3904~R3967), respectively. After connecting FBs-4A2D to the expansion interface on the PLC, FBs-PLC will automatically detect the number of AD/DA points. WinProladder will automatically detect and calculate the value IRs/ORs on the system after connecting to the PLC. Users may refer to the I/O Module Number Configuration provided by WinProladder in order to find out the exact I/O address of each expansion module to facilitate programming (see I/O Number Configuration, Section 12.6, WinProladder User's Manual for details).

### Address allocation of FBs-4A2D(Analog output)

## 20.4 FBs-4A2D hardware description

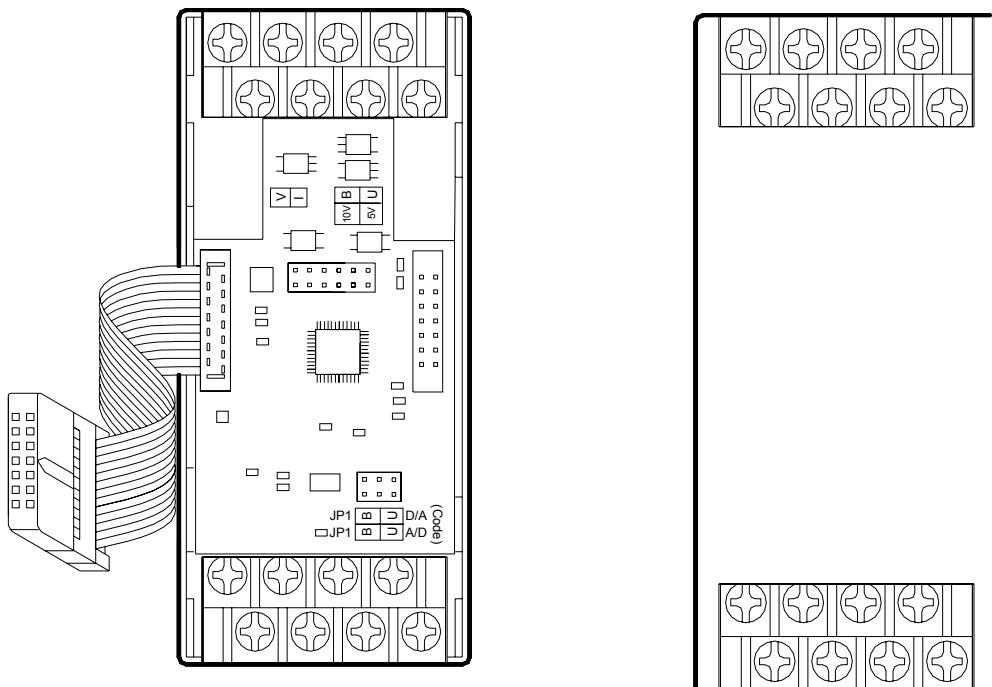

FBs-4A2D contains 3 PCBs overlapping one another. The lowest one is the power supply unit (isolated power supply). The middle one is the I/O board (connectors are on this layer). The upper one is the control board (control/expansion I/O connections) as described below.:

Outlook of top view

- 1 External power input terminal Power supply of analogue circuit for this module, the voltage can be 24VDC±20% and should be supplied with 4W of power at least.
- 2 Protecting ground terminal Connect to the shielding of signal cable.
- 3 Expansion input cable It should be connected to the front expansion unit, or the expansion output of main unit.

- 4 Expansion output connector Provides the connection for next expansion unit.
- 5 Power indicator It indicates whether the power supply at analogue circuit and external input power source are normal.
- 6 AG Ground No connection is needed in general; except when the common mode signal is too high. See examples overleaf for details.
- 7 8 Output terminal of CH0 CH1.
- 9 12 Input terminal of CH0 CH3.

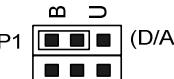

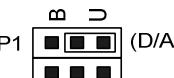

#### 20.4.1 FBs-4A2D hardware jumper setting

Pin Layout in Control Board (open top cover)

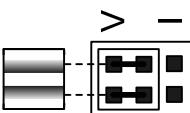

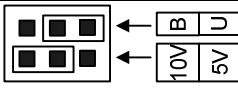

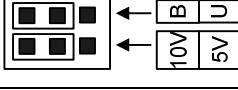

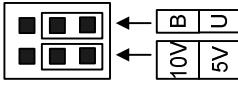

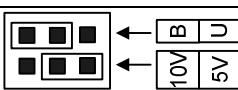

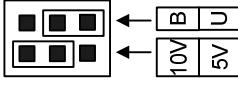

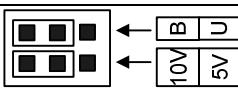

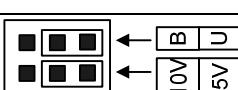

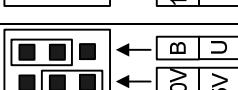

Users can select between unipolar and bipolar codes. The output range of unipolar codes and bipolar codes is

|     |   |   |
|-----|---|---|
| 0   | ~ |   |
| o   | u |   |
| o   | f |   |
| t   |   | h |
| t   |   |   |
| o : | f |   |

| Output Code Format | JP1 Setting   | Output Value Range | Corresponding Input Signals |
|--------------------|---|--------------------|-----------------------------|
| Bipolar            | JP1<br><br>(D/A) | -8192 8191         | -10V 10V(-20mA 20mA)        |
|                    |   |                    | -5V 5V(-20mA 20mA)          |
| Unipolar           | JP1<br><br>(D/A) | 0 16383            | 0V 10V(0mA 20mA)            |
|                    |   |                    | 0V 5V(0mA 10mA)             |

## 2. Output signal form setup (JPA&JPB)

Users can set the output signal form (voltage/current) of individual channels; except the polarity and amplitude which are common.

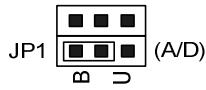

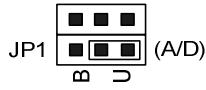

| Signal Form | JPA (voltage/current) Setting   | JPB (polarity/amplitude) Setting  |
|-------------|---|---|
| 0V 10V      |  |    |
| -10V 10V    |   |    |
| 0V 5V       |   |   |
| -5V 5V      |   |  |
| 0mA 20mA    |   |  |
| -20mA 20mA  |   |  |
| 0mA 10mA    |   |  |
| -10mA 10VmA |   |  |

(Analog input)

## 1. Input code format selection (JP1)

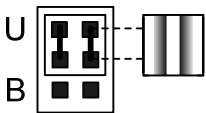

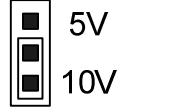

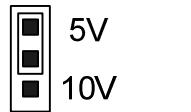

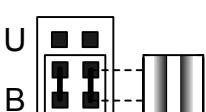

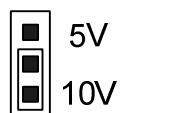

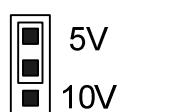

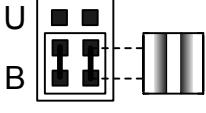

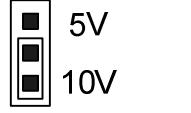

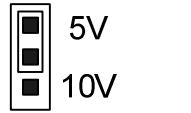

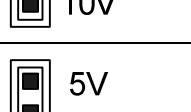

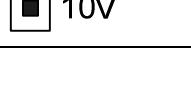

Users can select between unipolar and bipolar codes. The input range of unipolar codes and bipolar codes is 0~16383 and –8192~8191, respectively. The two extreme values of these formats correspond to the lowest and highest input signal values, respectively (see table below). For example, if the input signal type is set to -10V~ +10V, the unipolar code corresponding to the input is 8192 and the bipolar code corresponding to the input is 0 for 0V input. If the input is 10V, the unipolar code corresponding to the input is 16383 and the bipolar code corresponding to the input is 8191. In general, the input code format is selected according to the form of input signals; i.e. unipolar codes for unipolar input signals; and bipolar codes for bipolar input signals. In doing so, their correlations will become more heuristics. Unless it is

necessary to make a deviation conversion through FUN32; otherwise, do not select bipolar codes for unipolar input signals (see FUN32 description for details). The format of input codes of all channels is selected from JP1. See above diagram for the location of JP1

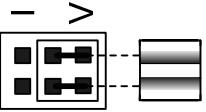

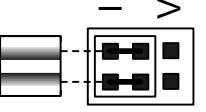

| Input Code Format | JP1 Setting  | Input Value Range | Corresponding Input Signals |
|-------------------|--|-------------------|-----------------------------|
| Bipolar           | JP1<br> | -8192 8191        | -10V 10V(-20mA 20mA)        |
|                   |  |                   | -5V 5V(-20mA 20mA)          |
| Unipolar          | JP1<br> | 0 16383           | 0V 10V(0mA 20mA)            |
|                   |  |                   | 0V 5V(0mA 10mA)             |

## 2. Input signal form setup (JP3&JP4)

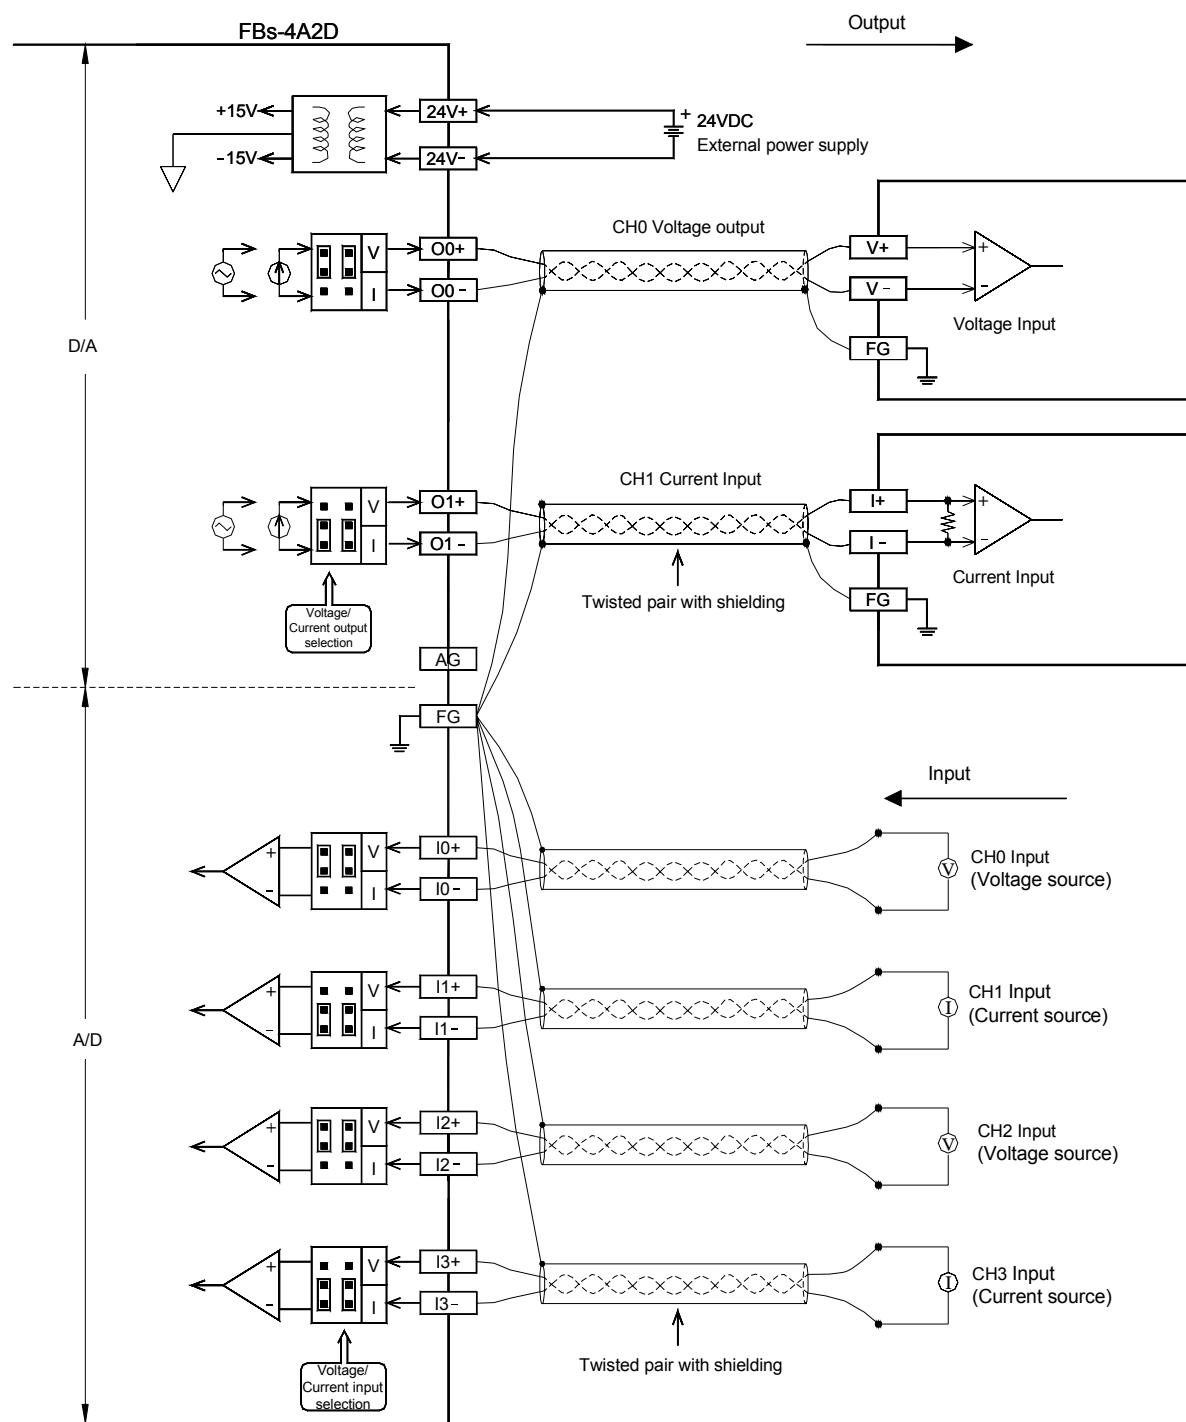

Users can set the input signal form (voltage/current) of individual channels; except the polarity and amplitude which are common. The location of jumpers are tabulated below

| Signal Form                 | JP3 Setting   | JP4 Setting  |
|-----------------------------|---|--|
| 0 10V<br>or<br>0 20mA       |  | <br>5V<br>10V  |
|                             |   | <br>5V<br>10V |
| 0 5V<br>or<br>0 10mA        |  | <br>5V<br>10V |
|                             |   | <br>5V<br>10V |
| -10 +10V<br>or<br>-20 +20mA |  | <br>5V<br>10V |
|                             |   | <br>5V<br>10V |
| -5 +5V<br>or<br>-10mA +10mA |  | <br>5V<br>10V |
|                             |   | <br>5V<br>10V |

## 3. Voltage or current setting (JP5~JP8)

| Signal Type | JP5(CH0)      JP8(CH3) Setting  |
|-------------|---|
| Voltage     |  |
| Current     |  |

## 20.5 FBs-4A2D input/output circuit diagram

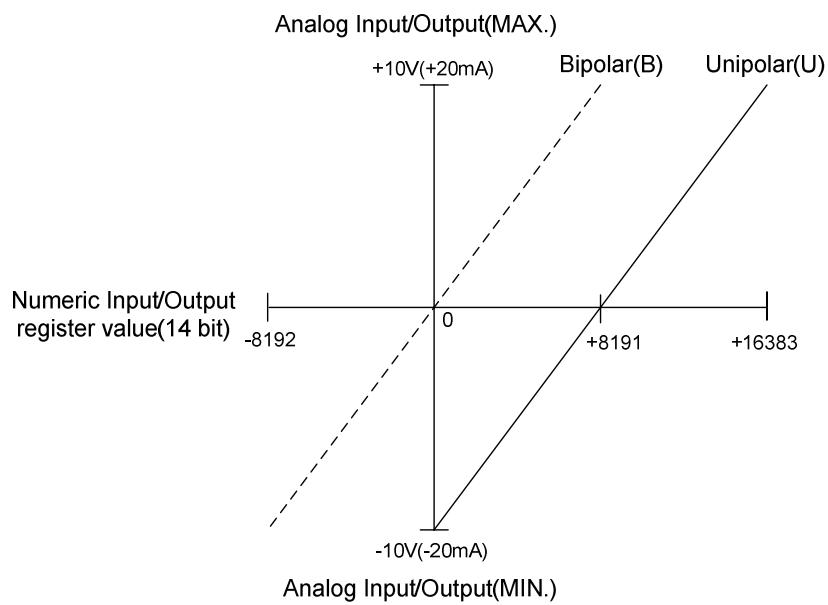

## 20.6 FBs-4A2D input/output characteristics

Users can select the I/O ranges of FBs-4A2D from the jumpers described above, such as V/I, U/B (I/O codes), U/B (signal form), 5V/10V, etc. The I/O conversion characteristics of these settings are illustrated below. Users can adjust different I/O forms by coordinating the conversion curve with various V/I (voltage/current) I/O settings. See Section 20.4 for details of V/I settings.

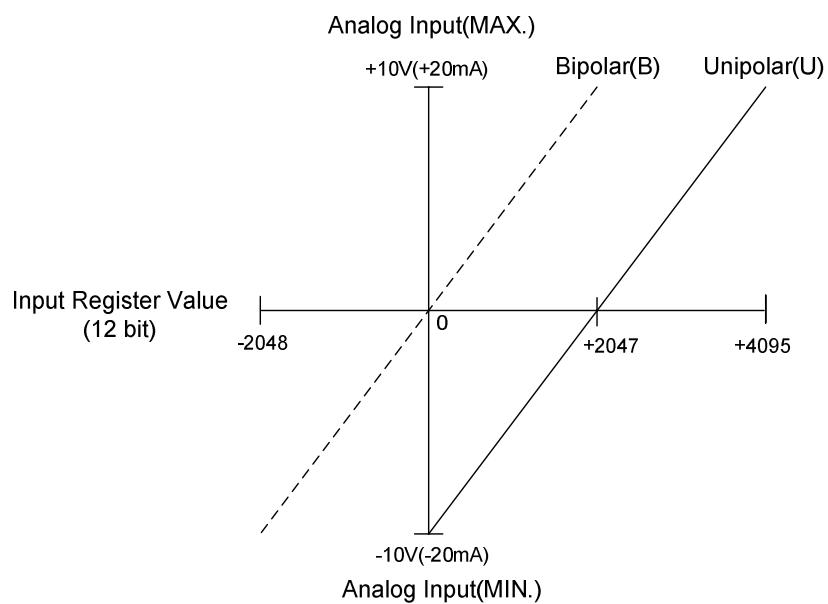

Diagram 1 Bipolar 10V 20mA Span

|                    |         |       |      |
|--------------------|---------|-------|------|
| Input/Output Range | Voltage | -10V  | 10V  |
|                    | Current | -20mA | 20mA |

|--------------------|---------|----------|
| Input/Output Range | Voltage | 0V 5V    |
|                    | Current | 0mA 10mA |

14 bit input/output format

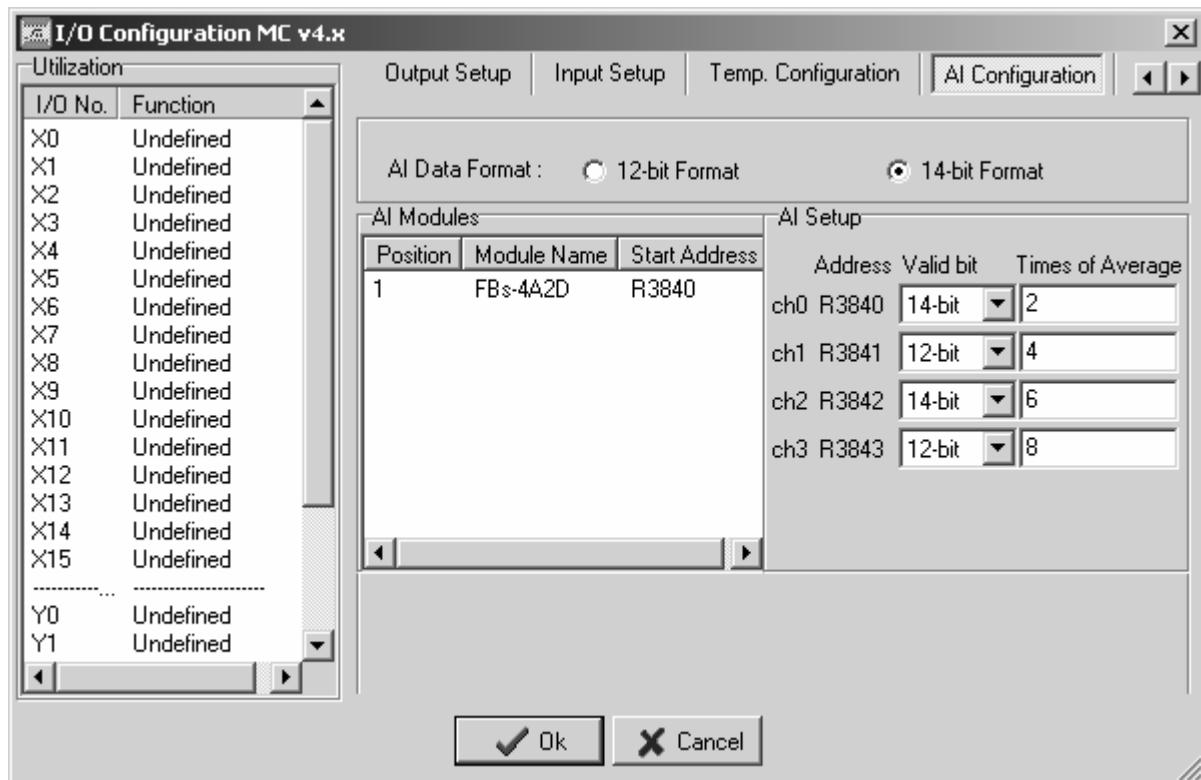

12 bit input format

No 12-bit mode for analog output

## 20.7 FBs-4A2D analog input format planning

The reading input format planning of FBs-4A2D is exactly the same as that of FBs-6AD. See Section 18.7 for details. The figure below shows the FBs-4A2D analog input format planning screen in WinProladder.
